*Allowable Subject Matter*

1. Claims 10-12 and 14-32 are allowed. The following is an examiner's statement of reasons for allowance:

a. As for independent claim 10 and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a device for activating an actuator system for protecting a pedestrian, the device being connected to an environment sensor system and a contact sensor system, the device comprising: an arrangement for comparing a first signal from a contact sensor system to a threshold, an arrangement for comparing the first signal to a noise threshold to ascertain a starting point for the first comparison, an arrangement for changing either of the first signal and the threshold as a function of a second signal from an environmental sensor; the actuator system being activated as a function of the comparing; and an arrangement for changing the threshold in response to a passage of a predetermined amount of time.

b. As for independent claim 12 and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a device for activating an actuator system for protecting a pedestrian, the device being connected to an environment sensor system and a contact sensor system, the device comprising: an arrangement for comparing a first signal from a contact sensor system to a threshold, an arrangement for comparing the first signal to a noise threshold to ascertain a starting point for the first comparison, an arrangement for changing either of the first signal and the threshold as a function of a second signal from an environmental sensor; the actuator system being

activated as a function of the comparing; and an arrangement for determining a starting point for the first comparison from a third signal of the environment sensor system.

c. As for independent claim 29 and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a device for activating an actuator system for protecting a pedestrian, the device being connected to an environment sensor system and a contact sensor system, the device comprising: an arrangement for comparing a first signal from a contact sensor system to a threshold, an arrangement for changing either of the first signal and the threshold as a function of a second signal from an environmental sensor; the actuator system being activated as a function of the comparing; and an arrangement for determining a starting point for the first comparison from a third signal of the environment sensor system.

d. As for independent claim 30 and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a device for activating an actuator system for protecting a pedestrian, the device being connected to an environment sensor system and a contact sensor system, the device comprising: an arrangement for comparing a first signal from a contact sensor system to a threshold, an arrangement for changing either of the first signal and the threshold as a function of a second signal from an environmental sensor; the actuator system being activated as a function of the comparing; and an arrangement for changing the threshold in response to a passage of a predetermined amount of time, wherein the threshold is raised after passage of the predetermined amount of time without detection of an impact.

e. As for independent claim 31 and all claims depending therefrom, the prior art of record fails to sufficiently describe and/or suggest a device for activating an actuator system for protecting a pedestrian, the device being connected to an environment sensor system and a contact sensor system, the device comprising: an arrangement for comparing a first signal from a contact sensor system to a threshold, an arrangement for changing the threshold as a function of a second signal from an environmental sensor; the actuator system being activated as a function of the comparing; wherein the threshold is changed as a function of an impact time predicted based on the second signal.

These along with further limitations set forth by the claims render the application allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
